

POST MORTEM
CS 135 Fall 2025, Assignment 07

Question 3: playlists.rkt

Mistakes in Data Definition:

- Many students missed the requires clause for `BSongT`.
- Many students used the word "String" instead of the correct keyword `Str`.
- Some students who included the requires for `BSongT` missed adding the requirement:
"Strs are unique" in reference to the song title names. (No deduction)

Mistakes in Contracts:

- Many people wrote `String` instead of `Str`, or `Boolean` instead of `Bool`.
- Some people incorrectly capitalized `BSongT`.

Question 4: wythoff.rkt

- This question was done generally well. Some students did not use mutual recursion, which uses a very simple and easily understandable structure (no deduction this time).
