

POST MORTEM
CS 135 Fall 2025, Assignment 08

Question 1: `any.rkt`

Mistakes in Contracts:

- Many students used `Symbol` instead of `Sym`.
- Some students mixed up the order of the parameters. For example, `loa-transform` is supposed to have the contract `loa-transform: Sym Sym (listof Any) -> (listof Any)` instead of `loa-transform: (listof Any) Sym Sym -> (listof Any)` as per the `check-expect` examples given in the question.

Mistakes in Style:

- Some students did not properly encapsulate helper functions that were only used for one function within a `local`. A 25% mark deduction was applied for the entire question for those students.

Question 2: `filedir.rkt`

Mistakes in Contracts:

- For Q3c), a common error was writing `(anyof Nat Bool)` for the produced type, instead of `(anyof Nat false)`
- Some students also wrote incorrect notation, such as `String`, instead of `Str`

Mistakes in Style:

- Some students did not properly encapsulate helper functions that were only used for one function within a `local`. A 25% mark deduction was applied for the entire question for those students.
