

CS 341: Algorithms

Lec 08: Dijkstra's Algorithms

Armin Jamshidpey Collin Roberts

David R. Cheriton School of Computer Science, University of Waterloo

Winter 2025

Preliminaries

- $G = (V, E)$ a directed graph with a weight function:

$$w : E \rightarrow \mathbb{R}$$

- The weight of path

$P = \langle v_0, \dots, v_k \rangle$ is:

$$w(P) = \sum_{i=1}^k w(v_{i-1}, v_i)$$

Preliminaries

Padlet (True/False)

Shortest path exists in any directed weighted graph.

<https://padlet.com/arminjamshidpey/CS341>

Preliminaries

Padlet (True/False)

Shortest path exists in any directed weighted graph.

<https://padlet.com/arminjamshidpey/CS341>

- Assumption: G has no negative-weight cycles
- The shortest path weight from u to v :

$$\delta(u, v) = \begin{cases} \min\{w(P) : u \overset{P}{\rightsquigarrow} v\} & \text{if there exists a path from } u \text{ to } v \\ \infty & \text{otherwise} \end{cases}$$

Preliminaries

Single-Source Shortest Path Problem

Input: $G = (V, E)$, $w : E \rightarrow \mathbb{R}$ and a source $s \in V$

Output: A shortest path from s to each $v \in V$

True/False: If $\langle v_0, v_1, \dots, v_k \rangle$ is a shortest path from v_0 to v_k , then $\langle v_0, v_1, \dots, v_i \rangle$ is a shortest path from v_0 to v_i , for any $0 \leq i \leq k$.

Padlet: <https://padlet.com/arminjamshidpey/CS341>

Overview

- Explanation of Dijkstra's algorithm
- Pseudocode of the algorithm
- An example
- Complexity analysis
- Proof of correctness

E. Dijkstra (1930-2002)
Turing Award (1972)

“Computer Science is no more about computers than astronomy is about telescopes.”

-E. Dijkstra

Dijkstra's algorithm: Explanation

Dijkstra's algorithm is a **greedy algorithm**

Input: A weighted directed graph with non-negative edge weights

- For all vertices, maintain quantities
 - ▶ $d[v]$: a shortest-path estimate from s to v
 - ▶ $\pi[v]$: predecessor in the path (a vertex or NIL)

Dijkstra's algorithm: Explanation

Dijkstra's algorithm is a **greedy algorithm**

Input: A weighted directed graph with non-negative edge weights

- For all vertices, maintain quantities
 - ▶ $d[v]$: a shortest-path estimate from s to v
 - ▶ $\pi[v]$: predecessor in the path (a vertex or NIL)

Dijkstra's algorithm: Explanation

- Initialize $C = \emptyset$, repeat the following until $C = V$:
 - ▶ Add $u \in V - C$ with **smallest d -value** to C
 - ▶ Update d -values of vertices v with $(u, v) \in E$:
$$d[v] \leftarrow \min\{d[v], d[u] + w(u, v)\}$$
 - ▶ Update $\pi[v]$ if $d[v]$ is changed

Dijkstra's algorithm: Explanation

Which Abstract Data Type (ADT) should we use for vertices?

Padlet: <https://padlet.com/arminjamshidpey/CS341>

Dijkstra's algorithm: Explanation

Which Abstract Data Type (ADT) should we use for vertices?

Padlet: <https://padlet.com/arminjamshidpey/CS341>

Dijkstra's algorithm: Explanation

Which Abstract Data Type (ADT) should we use for vertices?

Padlet: <https://padlet.com/arminjamshidpey/CS341>

Cost of operations of a binary min-heap (of size n):

- Insert: $O(\log n)$
- Extract-Min: $O(\log n)$
- Update-Key: $O(\log n)$

Dijkstra's algorithm: Pseudocode

DIJKSTRA(G, w, s)

- 1 **for** each vertex $v \in V[G]$
- 2 $d[v] \leftarrow \infty$
- 3 $\pi[v] \leftarrow \text{NIL}$
- 4 $d[s] \leftarrow 0$

Dijkstra's algorithm: Pseudocode

DIJKSTRA(G, w, s)

- 1 **for** each vertex $v \in V[G]$
- 2 $d[v] \leftarrow \infty$
- 3 $\pi[v] \leftarrow \text{NIL}$
- 4 $d[s] \leftarrow 0$
- 5 $C \leftarrow \emptyset$
- 6 $Q \leftarrow V[G]$

Dijkstra's algorithm: Pseudocode

DIJKSTRA(G, w, s)

```
1  for each vertex  $v \in V[G]$ 
2       $d[v] \leftarrow \infty$ 
3       $\pi[v] \leftarrow \text{NIL}$ 
4   $d[s] \leftarrow 0$ 
5   $C \leftarrow \emptyset$ 
6   $Q \leftarrow V[G]$ 
7  while  $Q \neq \emptyset$ 
8       $u \leftarrow \text{EXTRACT-MIN}(Q)$ 
9       $C \leftarrow C \cup \{u\}$ 
```

Dijkstra's algorithm: Pseudocode

```
DIJKSTRA( $G, w, s$ )
1  for each vertex  $v \in V[G]$ 
2       $d[v] \leftarrow \infty$ 
3       $\pi[v] \leftarrow \text{NIL}$ 
4   $d[s] \leftarrow 0$ 
5   $C \leftarrow \emptyset$ 
6   $Q \leftarrow V[G]$ 
7  while  $Q \neq \emptyset$ 
8       $u \leftarrow \text{EXTRACT-MIN}(Q)$ 
9       $C \leftarrow C \cup \{u\}$ 
10     for each vertex  $v \in \text{Adj}[u]$ 
11         if  $d[v] > d[u] + w(u, v)$ 
12              $d[v] \leftarrow d[u] + w(u, v)$ 
13              $\pi[v] \leftarrow u$ 
```

Dijkstra's algorithm: Example

DIJKSTRA(G, w, s)

```
1  for each vertex  $v \in V[G]$ 
2       $d[v] \leftarrow \infty$ 
3       $\pi[v] \leftarrow \text{NIL}$ 
4   $d[s] \leftarrow 0$ 
5   $C \leftarrow \emptyset$ 
6   $Q \leftarrow V[G]$ 
7  while  $Q \neq \emptyset$ 
8       $u \leftarrow \text{EXTRACT-MIN}(Q)$ 
9       $C \leftarrow C \cup \{u\}$ 
10     for each vertex  $v \in \text{Adj}[u]$ 
11         if  $d[v] > d[u] + w(u, v)$ 
12              $d[v] \leftarrow d[u] + w(u, v)$ 
13              $\pi[v] \leftarrow u$ 
```

Figure: An example from CLRS

Dijkstra's algorithm: Example

DIJKSTRA(G, w, s)

```
1  for each vertex  $v \in V[G]$ 
2       $d[v] \leftarrow \infty$ 
3       $\pi[v] \leftarrow \text{NIL}$ 
4   $d[s] \leftarrow 0$ 
5   $C \leftarrow \emptyset$ 
6   $Q \leftarrow V[G]$ 
7  while  $Q \neq \emptyset$ 
8       $u \leftarrow \text{EXTRACT-MIN}(Q)$ 
9       $C \leftarrow C \cup \{u\}$ 
10     for each vertex  $v \in \text{Adj}[u]$ 
11         if  $d[v] > d[u] + w(u, v)$ 
12              $d[v] \leftarrow d[u] + w(u, v)$ 
13              $\pi[v] \leftarrow u$ 
```

Dijkstra's algorithm: Proof of Correctness

Claim: For each vertex $v \in V$, we have $d[v] = \delta(s, v)$ at the time when v is added to set C . To prove the claim, we follow these steps:

Dijkstra's algorithm: Proof of Correctness

Claim: For each vertex $v \in V$, we have $d[v] = \delta(s, v)$ at the time when v is added to set C . To prove the claim, we follow these steps:

- 1 **Proof by contradiction:** Assume the claim is **not correct** and $u \in V$ is the first vertex for which $d[u] \neq \delta(s, u)$ when it is added to C .

Dijkstra's algorithm: Proof of Correctness

Claim: For each vertex $v \in V$, we have $d[v] = \delta(s, v)$ at the time when v is added to set C . To prove the claim, we follow these steps:

- 1 **Proof by contradiction:** Assume the claim is **not correct** and $u \in V$ is the first vertex for which $d[u] \neq \delta(s, u)$ when it is added to C .
- 2 **Time t :** Beginning of the iteration in which u is added to C .

Dijkstra's algorithm: Proof of Correctness

Claim: For each vertex $v \in V$, we have $d[v] = \delta(s, v)$ at the time when v is added to set C . To prove the claim, we follow these steps:

- 1 **Proof by contradiction:** Assume the claim is **not correct** and $u \in V$ is the first vertex for which $d[u] \neq \delta(s, u)$ when it is added to C .
- 2 **Time t :** Beginning of the iteration in which u is added to C .
- 3 Use a shortest path P , from s to u (**needs justification**)

C covers a part of P at time t

Dijkstra's algorithm: Proof of Correctness

- ④ On P , find y (with predecessor x), the first vertex in $V - C$.

Dijkstra's algorithm: Proof of Correctness

- On P , find y (with predecessor x), the first vertex in $V - C$.
- At time t , we have $d[y] = \delta(s, y)$. (needs Justification)

Dijkstra's algorithm: Proof of Correctness

- On P , find y (with predecessor x), the first vertex in $V - C$.
- At time t , we have $d[y] = \delta(s, y)$. (needs Justification)
- Fact 1: $d[y] = \delta(s, y) \leq \delta(s, u) \leq d[u]$

Dijkstra's algorithm: Proof of Correctness

- 4 On P , find y (with predecessor x), the first vertex in $V - C$.
- 5 At time t , we have $d[y] = \delta(s, y)$. (needs Justification)
- 6 Fact 1: $d[y] = \delta(s, y) \leq \delta(s, u) \leq d[u]$
- 7 Fact 2: at time t the algorithm chose u . Hence

$$d[u] \leq d[y]$$

Dijkstra's algorithm: Proof of Correctness

4 On P , find y (with predecessor x), the first vertex in $V - C$.

5 At time t , we have $d[y] = \delta(s, y)$. (needs Justification)

6 Fact 1: $d[y] = \delta(s, y) \leq \delta(s, u) \leq d[u]$

7 Fact 2: at time t the algorithm chose u . Hence

$$d[u] \leq d[y]$$

8 From equations facts 1 and 2 we conclude:

$$d[y] = \delta(s, y) = \delta(s, u) = d[u]$$

Dijkstra's algorithm: Proof of Correctness

- ⑧ Use a shortest path P , from s to u
(needs justification)

Proof:

C covers a part of P at time t

Dijkstra's algorithm: Proof of Correctness

- At time t , we have $d[y] = \delta(s, y)$.

Proof:
